Ex. No: 1

Date:

Comparative study of low code development versus traditional application development approaches

Aim:

To compare traditional application development and low code development based on their feature, advantages and disadvantages.

Features of Traditional vs Low code:

Traditional Development	Low Code Development
1) Required Programming knowledge	1) Minimal coding Required
2) Developed using languages like java, Python, C#, etc...	2) Uses drag and drop interface.
3) Longer Development Time	3) Faster Development Time
4) High flexibility and customization	4) Limited customization.
5) Suitable for complex application	5) Suitable for simple to medium business Application.

Advantage of traditional vs Low Code:

Traditional Development:

1) Highly customizable
2) Suitable for large and complex projects.

3) Better control over applicatio design and performance.
4) Supports advantage integration.

Low code Development:

1) Faster Application Development
2) Required less coding knowledg
3) Reduces Development cost.
4) Easy Maintenance and upda

Disadvantages of Traditional vs Low code

Traditional Development:

1) Time consuming
2) Requires skilled developer
3) Higher Development and Maintaince cost.
4) Longer testing and Development Process.

Low code Development:

1) Limited customization Option.
2) Vendor Dependency
3) May not be suitable for highly complex application
4) Licensing costs for Enterprise platforms

Comparision of Traditional vs Low Code:

Traditional Development	Low Code Development
1) Takes more time to develop applications	1) Develops Applications with much Faster.
2) Requires Strong Programming Skills	2) Requires little or no programming Knowledge
3) Highly Flexible and customizable	3) Limited customization Options
4) Higher Development and Maintenance cost	4) Lower Development and Maintenance cost.

Result: 10/10/25

Traditional Development offers high flexibility and customization, while low code development enables faster application development with minimal coding.
