EXPERIMENT 11: DEVELOPMENT TO PRODUCTION

Project: Hotel Booking Using Low-Code in Zoho Creator

AIM

To plan a safe release of the Hotel Booking application from the development environment to production.

REQUIREMENTS

- Development version of the Zoho Creator application
- Test data and test cases
- Authorized access to deployment or publish controls

DESIGN / MODULES

Stage	Main Task
Development	Create forms, reports, and workflows
Testing	Verify bookings, room availability, permissions, and notifications
Production	Publish after approval and final checks
Rollback	Keep a known-good version and document recovery steps

PROCEDURE

1. Configure the Guest, Room, Booking forms, reports, and workflows in the development environment.
2. Prepare test cases for valid bookings, invalid dates, unavailable rooms, cancellations, and permissions.
3. Verify connections, environment settings, and notification recipients.
4. Use the deployment or publishing option available in the Zoho Creator account.
5. Obtain approval from an authorized reviewer before release.
6. After publishing, perform a small smoke test to verify the application's main functions.
7. Record the release version, date, issues, approval, and rollback procedure.

SAMPLE LOGIC / OUTPUT

Release Checklist:

- Forms verified

- Reports verified
- Workflows verified
- User permissions tested
- Connection settings checked
- Backup or known-good version recorded
- Reviewer approval documented

Sample Deluge Logic:

```
if(input.Check_In >= zoho.currentdate && input.Check_Out > input.Check_In)
{
   info "Booking dates are valid";
}
else
{
   alert "Please enter valid booking dates";
}
```

Note: This is sample date-validation logic. Configure it in the appropriate form workflow and verify the field link names in the actual application.

TEST CASES

Test Case	Expected Outcome
Submit a valid booking after release	Booking record is saved correctly
Select an unavailable room	Booking is rejected or marked pending
Enter invalid booking dates	Validation message is displayed
Cancel a booking	Booking status is updated
Guest opens a restricted area	Access is denied

RESULT

A development-to-production release and verification plan for the Hotel Booking application in Zoho Creator was prepared. Actual production deployment is confirmed only after the authorized publishing process has been completed successfully.
